

Appl. No. 10/709,201
Amdt. dated December 14, 2005
Reply to Office action of October 05, 2005

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1 (currently amended): An image reading device comprising:

- 5 a housing;
 a lens installed inside the housing for focusing light;
 a photosensor installed on a first right side of the lens for converting light
 outputted from the lens into digital signals; and
 a plurality of reflectors installed on a ~~second~~ left side of the lens for reflecting
10 light inputted into the image reading device to form a linear optical path in
 order to guide light to the photosensor via the lens;
 wherein no reflector is installed on the ~~first right~~ side of the lens or is located
 above a first plane defined by a top end of the lens or below a second plane
 defined by a bottom end of the lens.

15

2 (original): The image reading device of claim 1 wherein the linear optical path passes
between two reflectors closest to the lens, and reaches the photosensor via the lens.

20

3 (original): The image reading device of claim 1 wherein two reflectors closest to the
lens are capable of partially covering an edge ring of the lens but not a main part of
the lens for allowing light to focus on the photosensor via the lens.

25

4 (original): The image reading device of claim 1 wherein the image reading device
further comprises a light source for generating light.

5 (original): The image reading device of claim 1 wherein the photosensor is a charge
coupled device (CCD).

Appl. No. 10/709,201
Amdt. dated December 14, 2005
Reply to Office action of October 05, 2005

6 (original): The image reading device of claim 1 wherein the photosensor is a complementary metal-oxide semiconductor (CMOS).

5 7 (original): The image reading device of claim 1 wherein the image reading device is a scanning module of a scanner having three reflectors.

8 (original): The image reading device of claim 1 wherein the image reading device is a scanning module of a scanner having four reflectors.

10

9 (original): The image reading device of claim 1 wherein the image reading device is a scanning module of a scanner having five reflectors.

10 (currently amended): A scanning module of a scanner comprising:

15

a housing;

a lens installed inside the housing for focusing light;

a photosensor installed on a ~~first~~ right side of the lens for converting light outputted from the lens into digital signals; and

20

a plurality of reflectors installed on a ~~second~~ left side of the lens for reflecting light inputted into the scanning module to form a linear optical path in order to guide the light to the photosensor via the lens;

wherein no reflector is installed on the ~~first~~ right side of the lens or is located above a first plane defined by a top end of the lens or below a second plane defined by a bottom end of the lens.

25

11 (original): The scanning module of claim 10 wherein the linear optical path passes between two reflectors closest to the lens, and reaches the photosensor via the lens.

Appl. No. 10/709,201
Amdt. dated December 14, 2005

12 (original): The scanning module of claim 10 wherein two reflectors closest to the lens are capable of partially covering an edge ring of the lens but not a main part of the lens for allowing light to focus on the photosensor via the lens.

5 13 (original): The scanning module of claim 10 wherein the scanning module further comprises a light source for generating light.

14 (original): The scanning module of claim 10 wherein the photosensor is a CCD.

10 15 (original): The scanning module of claim 10 wherein the photosensor is a CMOS.

16 (original): The scanning module of claim 10 wherein the scanning module comprises three reflectors.

15 17 (original): The scanning module of claim 10 wherein the scanning module comprises four reflectors.

18 (original): The scanning module of claim 10 wherein the scanning module comprises five reflectors.

20
